

Intercropping benefits:

16-29% more yield

38% higher gross energy

19-36% less fertiliser use

Higher yield stability

33% higher gross income

Opportunities:

- Environmentally, economically and socially more sustainable primary production
- Better product quality
- Increased resilience to climate change
- Novel products using underutilized crops

What we do:

- Transdisciplinary research involving stakeholders and their needs
- Multi-factorial experiments under highly controlled conditions
- Participatory on-farm research
- Collaborations with industry along the food value chain
- Education and outreach

Industry partners we are working with:

- [Coop Switzerland](#) (Retail)
- [Getreidezüchtung Peter Kunz, Switzerland](#) (Plant breeding)
- [Cooperative Lipa, North Macedonia](#) (Production and Direct Marketing)
